## About the Seminar

Ecosystem restoration in India is crucial due to the country's vast and diverse ecological landscapes, ranging from forests and wetlands to coastal and desert ecosystems. The degradation of these ecosystems has led to significant biodiversity loss, reduced agricultural productivity, water scarcity, and climate vulnerabilities. Addressing these issues through restoration efforts by engaging local communities, including tribal and rural populations in rehabilitation of ecosystem can enhance effectiveness in biodiversity conservation and climate change mitigation. Despite promising opportunities, challenges such as funding, bureaucratic hurdles, and socio-economic constraints hinder restoration efforts. The primary aim of the international conference is to create a platform for researchers, policymakers, environmentalists, and stakeholders to collaborate and discuss strategies to drive actionable solutions that contribute to India's long-term ecological sustainability.
